

Hamburg Mat Filter – with integrated plants

If fish density is high, good filtration and sufficient oxygen supply are vital!

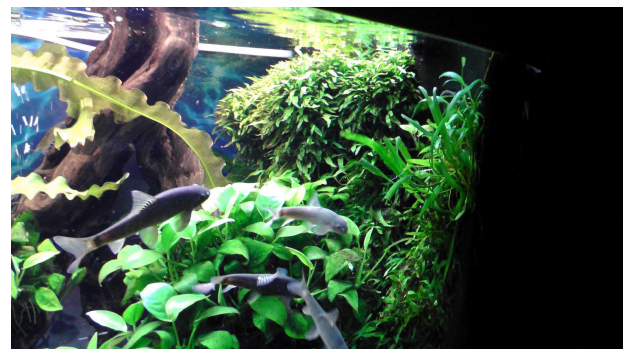

For this reason, we use the Hamburg Mat Filter (with a pump and aeration stone) both at home and in our hatchery. Simple, reliable, inexpensive and excellent!

Because a Hamburg Mat Filter is not very decorative to look at, we decided to enhance it with aquarium plants. Here, you can see the result:

The equipment is hidden behind the filter mat, including: 7 Watt pump, thermometer, heating rod.

Filter mat freshly planted with Java fern (Microsorium Pteropus). (Simply cut slits into the mat and place the plants into the slits.)

Hamburg Mat Filter with integrated plants after 11 months
